

POLICY

Environment and sustainability

We're committed to safeguarding and enriching the health, diversity, and productivity of the environment for the benefit of stakeholders, including clients, employees, shareholders, the community, and future generations.

The aim of this policy is to execute projects and deliver services in an environmentally and sustainably responsible manner.

We aim to achieve this target by:

- Compliance with relevant environmental legislation, regulations, codes of practice, and contractual obligations.
- Integration of sustainable practices to prevent environmental pollution from activities under our control.
- Priority attention to addressing threats of serious or irreversible environmental harm.
- Preservation of biological diversity and ecological integrity, while considering the true cost of environmental factors in project decisions.
- Provision of training, education, and awareness programs for both workers and contractors.
- Engagement in business with suppliers and contractors who share our commitment to responsible environmental management, including minimising the use of non-renewable sources and identifying renewable alternatives in engineering design, procurement, and delivery processes.
- Promotion of environmental sustainability by reducing waste generation and minimising disposal of waste products that are not suitable for recycling.
- Continuous enhancement of our environmental management performance through regular reviews and establishment of realistic environmental objectives and targets.

Our strategy for achieving this policy involves managing our activities in alignment with best practice environmental management principles.
